SIX JARS IN MODEL:

- 1.Data
- 2.Task
- 3.Model
- 4.Loss
- 5.Learning
- 6.Accuracy

Data:

The data we have used in names of all american names from nltk packages

Task:

To classify names to males and females from the records and extract last letter from the every names.

Model:

We have used naive bayes classifier uses bayes theorem to classify the data

Accuracy:

We have used last 2000 record out of 7000 records for testing ,got an accuracy of 75.7
